SUBJECT INDEX

Bold figures indicate the issue

Acceleration of pearlitic transformation by ultrasonic vibration **5,** 127
Ageing chromium-manganese steels during deformation. X-ray diffraction analysis of the fine structure of – **1,** 165
– , high-temperature. Influence of prior low-temperature maraging on changes in the properties of Fe–Ni–V alloys during – **1,** 61
– mechanism of iron–nickel–titanium alloys **2,** 126
– , natural, of aluminium–zinc alloys with a high zinc concentration **2,** 97
– of alloy VT16. Decomposition of the metastable β phase during – **5,** 151
– of alloys Fe–Be. The relations involved in the formation of a quasi-periodic distribution of precipitates during – **3,** 140
– of alloys Fe–Ni–V and Fe–Ni–Co–V. The "abnormal" change of martensite lattice parameter during – **1,** 84
– , step, influencing the structure and mechanical properties of heat resistant alloy EI698. Influence of – **6,** 127
– , strain, of solid solutions of niobium with nitrogen and oxygen **6,** 136
– , the four-phase model of the structure of iron–beryllium alloys at early stages of – **2,** 72
Alkali metals, temperature dependence of the third-order elastic moduli of – **4,** 23
Alloy, age-hardening aluminium–silver alloy investigated by spectroscopy and microscopy methods **4,** 101
– , aluminium–silver at the second stage of ageing. Diffuse electron and X-ray scattering and the structure of an – **5,** 162
– , copper–beryllium, features of the diffraction patterns of polycrystals of a – and an interpretation thereof **5,** 133
– Cu/Au with additions of nickel and silver. Phase precipitation on domain boundaries of ordered – **1,** 97
– EI698 heat resistant. Influence of step ageing on the structure and mechanical properties of – **6,** 127
– , iron–manganese, influence of nitrogen on the austenite lattice parameter of – **5,** 200
– , Kh12NM23, intermetallic phases in – **1,** 181
– 45KKhVN, tempering transformation and the strengthening of – **3,** 147
– Ni_3Mn, antiphase domain structure in – **1,** 196
– , nickel–aluminium–titanium, influence of deformation on mechanism of γ' phase precipitation in – **2,** 183
– , nickel–carbon quenched, structural electron microscopic investigation of the graphite in a – **5,** 121

– , Pd_3Fe, hyperfine interaction during ordering of – 3, 82
– , VT16, titanium, during continuous heating. Investigation of the decomposition of martensite in – 2, 171
Alloys, aluminium–zinc, with a high zinc concentration. Natural ageing of – 2, 97
– , bismuth–tellurium, dependence of the resistivity of – on their concentration 6, 158
– , chromium–rhenium, magnetic susceptibility and thermal expansion of – 6, 178
– , copper–niobium, directional crystallization and microstructure of – 6, 173
– , correlation between activity factors and short-range order parameters in – 3, 115
– , $CrNi_2$ type, ordering influenced by static stresses 3, 119
– , Cu–Pd, ordering and the physical properties of – 6, 66
– Fe–Be, the relations involved in the formation of a quasi-periodic distribution of precipitates during ageing of – 3, 140
– FeNiCr in the critical range of concentration. Magnetic state of – 5, 42
– Fe–Ni–V and Fe–Ni–Co–V. The "abnormal" change of martensite lattice parameter during ageing of – 1, 84
– , Fe–Ni–V, during high-temperature ageing. Influence of prior low-temperature maraging on changes in the properties of – 1, 61
– , gadolinium–dysprosium, longitudinal galvanomagnetic effect in single crystals of – 3, 58
– , gadolinium–dysprosium, the magnon contribution to the resistivity of single crystals of – 1, 32
– , gold–copper, optical properties of – 4, 157
– , Heusler, of the system copper–manganese–aluminium, the martensitic transformation in – 2, 118
– , high-coercivity, after treatment in differently oriented magnetic fields. Domains of interaction in – 5, 191
– , iron–beryllium, at early stages of ageing the four-phase model of the structure of – 2, 72
– iron–chromium, coexistence of ferro- and antiferromagnetism in – 2, 180
– , iron–chromium–nickel of different stabilities. Low-temperature thermal expansion of – 2, 83
– , iron–cobalt, to mechanical stresses as a result of heat treatment, the lower response of the magnetic properties of – 3, 178
– , iron–cobalt–vanadium, influence of heating rate on dilatation anomalies and $\alpha \rightarrow \gamma$ transformation in – 1, 71
– , iron–manganese, with an f.c.c. lattice. Magneto-volume anomaly in – 4, 46
– , iron–nickel and iron–manganese, memory effect in – 1, 170
– , iron–nickel, with an f.c.c. lattice. Neutron diffraction analysis of fine coherent effects in – 6, 164
– , iron–nickel–chromium, near the Curie point. Anomalous behaviour of the magnetization of – 4, 172
– , iron–nickel–titanium, on the ageing mechanism of – 2, 126
– , iron–nickel–vanadium, influence of cobalt on the maraging of – 5, 70
– , iron–platinum, ordered, investigation of single crystals of – 4, 169
– , iron–platinum ordered. I. Magnetic properties in strong magnetic fields. Investigation of single crystals of – 2, 49
– , iron–silicon–nitrogen, b.c.c.→f.c.c. martensitic transformation in – 2, 112

– , manganese copper, the shape memory effect and mechanism of plastic deformation in – 4, 139
– , nickel cast complex, phase composition of – 6, 150
– , nickel–cobalt, under high hydrogen pressure. Phase transformations in – 4, 182
– of the systems UMn_2–UFe_2 and UMn_2–UCo_2, magnetic properties of – 5, 30
– of transition and noble metals. Asymmetry of the shell electron PES spectra of components of – 6, 30
– , palladium–iron–gold. Influence of ordering on the magnetic properties of – 2, 54
– , principles of the formation of multilayer martensite structures in – 1, 90
– with mixed exchange interaction. Phenomenological theory of magnetization of – 3, 68
– with shape memory effect. Efficiency of heat engines with a solid working medium based on – 2, 174
– , Zr–Nb and Zr–Nb–Ge with a high concentration of the β stabilizer. Peculiarities of the $\beta \rightarrow \omega$ transformation in – 6, 77
Aluminium and zinc, single crystals of, features in the buildup of shears and distribution of microstrains during alternating bending of – 4, 145
Angles, low, between current and magnetic field. Measurement of magnetoresistance with – 5, 185
Anisotropy constants in quasibinary compounds $Sm_2(Co_{1-x}Me_x)_{17}$. Concentration and temperature dependencies of the – 4, 36
– constant, magnetic, due to line imperfections, local variation of the – 5, 50
– , high magnetic, on the free energy of uniaxial magnets with weak exchange interaction and – 5, 8
– , magnetic, of intermetallic compounds R_2Co_{17}. Role of rare-earth ions in the – 6, 38
– , resistivity, of single crystals of ruthenium and rhenium in the range 2–300°K 6, 54
Annealing influencing the structure and macrohardness of electrolytic copper 6, 184
– of radiation voids and dislocations in molybdenum, a theoretical description of the – 2, 133
Anomalies in the temperature dependence of the yield point of steel OKh18N10T after low-temperature cycles. On the nature of the – 2, 155
– , martensite crystal lattice, and thermodynamic properties of carbon in austenite. Relation between the – 4, 58
Antiferromagnet in a magnetic field, electron structure of an – 4, 1
– in a strong magnetic field, the phase transition of an – 5, 21
– , interaction of a moving dislocation with spin waves in an – 3, 171
Antiferromagnets, sound generation by an electromagnetic wave near orientational first-order phase transitions in – 1, 179
Appearance of cracks in a diffusion zone 6, 142
Asymmetry of the shell electron PES spectra of components of alloys of transition and noble metals 6, 30
Atoms, impurity, determination of the positions of – in a crystal lattice from their characteristic X-radiation 2, 8
– , interstitial, in different types of interstitial site in interstitial phases applied to the problem of isotropic ordering 5, 188
Austenite, aged, transformation of diffuse electron scattering intensity distributions during the martensitic transformation of – 4, 164

– formed during the heating of a quenched steel. Morphology and structural composition of – 5, 112
– , kinetic study of the dissolution of $M_{23}C_6$ carbide in – 2, 122
– lattice parameter of alloy iron–manganese. Influence of nitrogen on the – 5, 200
– orientations after the double martensitic transformation $\gamma \rightarrow \alpha \rightarrow \gamma$. Distribution of – 4, 62
– , softening and the structure of hot rolled – 1, 147

Base, uniaxial, magnetic reversal of a stripe domain structure magnetostatically bonded with a – 2, 41
B.c.c. lattice, influence of screw dislocations on the mechanical properties of metals with a – 4, 118
– , spontaneous capture and the activation energy of diffusion of hydrogen isotopes in metals with a – 6, 1
B.c.c. solid solutions of nitrogen in vanadium. Lattice superperiodicity in ordered quenching structures of – 3, 188
Behaviour, anomalous, of the magnetization of iron–nickel–chromium alloys near the Curie point 4, 172
Bloch wall of finite size, distribution of Néel segments in a – 3, 193
Boundary condition for the distribution function of cunduction electrons with anisotropic law of dispersion and the correction to the impedance of a metal in the normal skin effect 6, 17
Buildup of shears and distribution of microstrains during alternating bending of single crystals of aluminium and zinc 4, 145

Calculation of electric field gradients at nuclei in elastically deformed metals 4, 194
– of the surface energy of metals in the model of a discrete positive charge 1, 16
Capture, spontaneous, and the activation energy of diffusion of hydrogen isotopes in metals with a b.c.c. lattice 6, 1
Carbide formation in steels 30KhG and 30KhN, influence of molybdenum on – 2, 88
– , niobium, influence of reactor irradiation on the superconductive properties of – 2, 193
Carbon in austenite, relation between the martensite crystal lattice anomalies and thermodynamic properties of – 4, 58
Cementite, state of, in cold-deformed steel. Nuclear gamma resonance investigation of the – 5, 59
Change in austenite state before the martensitic transformation and the temperature M_{el} 3, 111
– in the low stress in a low carbon steel after unloading 6, 171
Cleavage, brittle, in a one-domain ferromagnet. Isolated void and – 1, 160
Cobalt influencing the maraging of iron–nickel–vanadium alloys 5, 70
Coexistence of ferro- and antiferromagnetism in iron–chromium alloys 2, 180
Composites, Bi–MnBi, peculiarities of the magnetic properties of – 1, 56
Compounds, intermetallic $Gd_xY_{1-x}Fe_3$, magnetic properties of – 5, 39
– R_2Co_{17}, role of rare-earth ions in the magnetic anisotropy of intermetallic – 6, 38
Computer calculation of the parameters of complex nuclear gamma resonance spectra 6, 47
Concentration stresses influencing diffusion 3, 128

Condensates, of polycrystalline, vacuum of aluminium. The structural peculiarities and porosity – **6,** 70
Conditions for formation of a twin α martensite structure on the system (011) ⟨011⟩ **4,** 97
Copper, electrolytic, influence of annealing on the structure and macrohardness of – **6,** 184
– , pure polycrystalline, influence of heat treatments on the size effect and grain boundary contributions to the residual resistivity of – **3,** 46
Correlation between activity factors and short-range order parameters in alloys **3,** 115
Creep rate, influence of dislocation pinning by impurity atoms on – **1,** 192
Critical range of concentration, magnetic state of γ-FeNiCr alloys in the – **5,** 42
Crystal, dislocations and point defects in a hydrostatically compressed – **6,** 8
– , non-uniformly stressed, vacancy statics and kinetics in a – **3,** 136
– , single, of molybdenum second and third-order elasticity moduli of a – **6,** 123
– surface, interaction of a moving grain boundary with a – **5,** 83
– with vacancies or substitutional impurities. Electron spectrum in a – **3,** 10
Crystallization, directional, and microstructure of copper–niobium alloys **6,** 173
– , directional, of eutectic alloys Ni–Ni_3Ti, Fe–Fe_2Ti and NiAl–Cr, features of – **5,** 146
Crystallogeometry of the formation of ε', ε, x' and α martensitic phase in steel **6,** 94
Crystals, single. VI. Diffusion of iridium in copper – **5,** 181
– , single, $GdCo_5$. Influence of dynamic elastic stresses on large Barkhausen discontinuities in – **1,** 184
– , single, kinetics of the substructural changes in fatigue tests of molybdenum – **4,** 149
– , single, of aluminium and zinc. Features in the buildup of shears and distribution of microstrains during alternating bending of – **4,** 145
– , single, of gadolinium–dysprosium alloys. Longitudinal galvanomagnetic effect in – **3,** 58
– , single, of gadolinium–dysprosium alloys. The magnon contribution to the resistivity of – **1,** 32
– , single, of ordered iron–platinum alloys. I. Magnetic properties in strong magnetic fields **2,** 49
– , single, of ordered iron–platinum alloys. II. Anisotropy of magnetic properties. Investigation of – **4,** 169
– , single, of ruthenium and rhenium in the range 2–300°K. Resistivity anisotropy of – **6,** 54
– , single, vanadium, as functions of degree and temperature of deformation. Slip geometry and the dislocation structure in – **1,** 130
– with an interstitial atom in a split configuration. Vibration spectrum of – **6,** 176
– with strong *s-d* exchange. Magnetic susceptibility of – **3,** 1
Currents, critical, of Nb_3Sn diffusion ribbon. Influence of zirconium on anisotropy of the – **2,** 33

Decay, Landau and the radiation width of collective levels of a non-uniform electron plasma 3, 26
Decomposition kinetics of metastable β phase in titanium alloy VT9 **2,** 107
– of Fe–Cr and Fe–CrCo solid solutions in a magnetic field **5,** 77
– of the metastable β phase during ageing of alloy VT16 **5,** 151
Defects with Coulomb displacement fields. X-ray scattering by polycrystals containing – **1,** 1

Deformation and ageing of a metastable β titanium alloy of Ti–Mo **1,** 78
– , high degrees of, strength of dislocation junctions and the work-hardening of alloys with the Ll_2 superstructure at – **1,** 103
– , investigation of the structural variations of polycrystalline vanadium during – **2,** 149
– martensite to austenite in stainless steels at different rates of heating. Transformation of – **6,** 114
– , plastic, of directionally crystallized eutectic $Ni/Ni_3Al–Ni_3Nb$ **1,** 124
– , plastic, the shape memory effect and mechanism of – in manganese–copper alloys **4,** 139
– , slip geometry and the dislocation structure in vanadium single crystals as functions of degree and temperature – **1,** 130
– , substructure of stainless steel after HTMT with high rates of – **6,** 106
Dependence, temperature, of the yield point of steel OKh18N10T after low-temperature cycles. Nature of the anomalies in the – **2,** 155
Dependencies, concentration and temperature, of the anisotropy constants in quasibinary compounds $Sm_2(Co_{1-x}Me_x)_{17}$ **4,** 36
Description, theoretical, of the annealing of radiation voids and dislocations in molybdenum **2,** 133
Diffuse electron scattering intensity distributions during the martensitic transformation of aged austenite. Transformation of – **4,** 164
Diffusion decomposition of a thin polycrystalline film on a solid substrate. Investigation of the "knob" mechanism of – **2,** 101
– in half space through a surface layer **2,** 167
– , mutual, during abnormal phase growths, peculiarities of the analysis of – **3,** 175
– of carbon in austenite after high-temperature thermomechanical treatment of steel **1,** 177
– of hydrogen isotopes in metals with a b.c.c. lattice. Spontaneous capture and the activation energy of – **6,** 1
– , volume and boundary, of silver in nickel **5,** 100
– zone, appearance of cracks in a – **6,** 142
Dilatation anomalies and $\alpha \rightarrow \gamma$ transformation in iron–cobalt–vanadium alloys. Influence of heating rate on – **1,** 71
Dislocation in an elastically non-linear medium. Integral equation for the displacement field of a – **2,** 26
– moving, with spin waves in an antiferromagnet. Interaction of a – **3,** 171
– nodes resulting from the interaction of basal dislocations in crystals with an h.c.p. lattice. Possible equilibrium configurations of – **1,** 154
– pinning by impurity atoms influencing the creep rate **1,** 192
– structure of the rolling texture components in polycrystalline molybdenum **4,** 52
Dislocations and point defects in a hydrostatically compressed crystal **6,** 8
– , basal, in crystals with an h.c.p. lattice. Possible equilibrum configurations of dislocation nodes resulting from the interaction of – **1,** 154
Dispersion hardening alloys. Influence of shock loading on the structure and properties of – **1,** 110
– hardening, submicroscopic structure of aged austenitic steel Kh12N20T3R and its role in dispersion hardening **4,** 74

Displacements, atomic, near martensitic transformation point, on the dynamic and quasistatic nature of – 5, 95
– field of a dislocation in an elastically non-linear medium. Integral equation for the – 2, 26
Dissolution of $M_{23}C_6$ carbide in austenite. Kinetic study of the – 2, 122
Distribution function of conduction electrons with anisotropic law of dispersion and the correction to the impedance of a metal in the normal skin effect. Boundary condition for the – 6, 17
– of austenite orientations after the double martensitic transformations 4, 62
– , quasi-periodic, of precipitates during ageing of alloys Fe–Be. The relations involved in the formation of a – 3, 140
Domain boundaries of ordered alloy Cu/Au with additions of nickel and silver. Phase precipitation on – 1, 97
– structure, antiphase, in alloy Ni_3Mn 1, 196
– structure, honeycomb, in magnetic films 3, 185
– structure of a polyaxial ferromagnet influenced by external stresses 6, 154
– structure of silicon iron. On the influence of tension on the – 2, 61
– structure, stripe, magnetostatically bonded with a uniaxial base. Magnetic reversal of a – 2, 41
– walls in magnetic films and plates. Nonlinear oscillations of – 3, 37
– walls, Néel, quasistatic and pulsating remagnetization of – 1, 45
– walls, some features of the snake-like motion of – 1, 51
Domains of interaction in high-coercivity alloys after treatment in differently oriented magnetic fields 5, 191
Dysprosium, polycrystalline, magnetic transformations and internal friction in – 1, 175

Easy glide model, permissible range of values for the parameters of the – 2, 142
Effect, isotopic, during hydrogen penetration through palladium 6, 167
–, longitudinal galvanomagnetic, in single crystals of gadolinum–dysprosium alloys 3, 58
Effects, non-linear, in magnetoelastic media. II. Influence of static magnetization on the generation of acoustic second harmonic 3, 31
– , non-linear magnetoelastic, and phase transitions in magnets 2, 17
– , quadrupole, in elastically deformed transition metals 3, 89
Efficiency of heat engines with a solid working medium based on alloys with shape memory effect 2, 174
Elasticity moduli, second and third-order, of a molybdenum single crystal 6, 123
Electron, conduction, spin resonance line in metals with strong surface relaxation 3, 16
– diffuse and X-ray scattering and the structure of an aluminium–silver alloy at the second stage of ageing 5, 162
– microscope with accelerating voltage 100 kV. Observation of the process of recrystallization during heating in the column of an – 2, 67
– plasma, Landau decay and the radiation width of collective levels of a non-uniform – 3, 26
– potentials and wave functions in lithium and sodium 2, 1
– spectrum in a crystal with vacancies or substitutional impurities 3, 10
– structure of an antiferromagnet in a magnetic field 4, 1

Energy, free, of uniaxial magnets with weak exchange interaction and high magnetic anisotropy. On the – 5, 8
– , surface, of metals in the model of a discrete positive charge. Calculation of the – 1, 16
Equilibrium with the melt influenced by graphitizing elements in the system iron–carbon under high pressure 3, 101
Eutectic $Ni/Ni_3Al–Ni_3Nb$, directionally crystallized. Plastic deformation of – 1, 124
– , tin-lead, influenced by thermomechanical treatment of its structure and plasticity 4, 191
Exchange, strong *s-d*, mangetic susceptibility of crystals with – 3, 1
External stresses influencing the domain structure of a polyaxial ferromagnet 6, 154

Failure, force activated, structural peculiarities of the transition of α iron from heat – 3, 154
Fatigue tests of molybdenum single crystals. Kinetics of the substructural changes in – 4, 149
F.c.c. lattice, magneto-volume anomaly in iron–manganese alloys with an – 4, 46
– , neutron diffraction analysis of fine coherence effects in iron–nickel alloys with an – 6, 164
Features of the diffraction patterns of polycrystals of a copper–beryllium alloy and an interpretation thereof 5, 133
– of the state of iron–nickel austenite near the martensitic transformation point 5, 157
Ferromagnet, one-domain, isolated void and brittle cleavage in a – 1, 160
– , polyaxial, influence of external stresses on the domain structure of a – 6, 154
– in an external magnetic field. Magnetization and the critical fields of a uniaxial two-sublattice – 5, 35
Field of a point defect. Problem of the motion of a bubble lattice in the – 1, 173
– , strong magnetic, the phase transition of an antiferromagnet in a – 5, 21
Fields, critical, of a uniaxial two-sublattice ferrimagnet in an external magnetic field. Magnetization and the – 5, 35
Film, polycrystalline, on a solid substrate. Investigation of the "knob" mechanism of diffusion decomposition of a thin – 2, 101
Films, cermet, of the system $(Fe–Ni)_{1-x}(SiO)_x$. Stresses in – 6, 146
– , exchange-coupled, influence of the depth of the hard magnetic layer on the character of remagnetization of – 3, 52
– , magnetic, honeycomb domain structure in – 3, 185
– , magnetic, nonlinear oscillations of domain walls in – and plates 3, 37
– , metal vacuum condensed. Influence of impurities and alloying elements on the grain structure of – 3, 96
– , monocrystalline FePd and FePt, for thermomagnetic recording 4, 179
– , thin, of manganese-bismuth, remagnetization mechanism of – 4, 175
Flow stress in a low carbon steel after unloading. Change in the – 6, 171
– , temperature dependence of – 3, 181
Fracture, dimpled, influence of the size of dispersed phase particles, on the microstructure of – 5, 173
Fragmentation and dynamic recrystallization in copper subjected to large and very large plastic strains 1, 136
Generation of magneto-elastic oscillations during high-frequency remagnetization of thin films 4, 189

– of second acoustic harmonics influenced by the misorientation of a crystal 6, 23
Grain boundary, moving, interaction of a – with a crystal surface 5, 83
– growth, texture barriers to – 1, 189
– structure of vacuum condensed metal films. Influence of impurities and alloying elements on the – 3, 96
Graphite in a quenched nickel–carbon alloy, structural electron microscopic investigation of the – 5, 121

Hall constant and resistivity of holmium and erbium at high temperatures 4, 196
Harmonics, acoustic, second. Theory of nonlinear effects in magnetoelastic media. II. Influence of static magnetization on the generation of – 3, 31
– , second acoustic, influence of the misorientation of a crystal on the generation of – 6, 23
Heat treatment influencing the size effect and grain boundary contributions to the residual resistivity of pure polycrystalline copper 3, 46
Hydro-extrusion, structure and mechanical properties of trip steels strengthened by – 6, 82
Hydrogen penetration through palladium. Isotopic effect during – 6, 167
Hydrostatic pressure, investigation of the plasticity of metals under – 5, 168
Hysteresis, magnetic, on the theory of – . Features of the remagnetization of monocrystalline ferromagnetic plates at commercial frequencies 1, 27
– , minor cycles in single-domain materials. Asymmetry of – 6, 180

Imperfections, line, local variation of the magnetic anisotropy constant due to – 5, 50
Impurities and alloying elements influencing the grain structure of vacuum condensed metal film 3, 96
Impurity diffusion in copper. VI. Diffusion of iridium in copper single crystals 5, 181
Influence of deformation on mechanism of γ' phase precipitation in nickel–aluminium–titanium alloy 2, 183
– of prerecrystallization annealing on the substructure and properties of quenched deformed beryllium bronze 4, 92
– of reactor irradiation on the superconductive properties of niobium carbide 2, 193
– of treatment on the Curie point of Elinvars 2, 195
Interaction, hyperfine, during ordering of alloy Pd_3Fe 3, 82
– of a moving grain boundary with a crystal surface 5, 83
– of impurities with dislocations in iron alloys. Snoek–Köster relaxation and the – 4, 114
Instability, plastic, of vanadium and alloy V–Zr–C. Radiation strengthening and – 1, 117
Internal friction in copper influenced by ultrasonic strains 6, 169
Investigation of the decomposition of α'' martensite in titanium alloy VT16 during continuous heating 2, 171
– , secondary ion-ion emission, of the decomposition of supersaturated solid solutions of aluminium–lithium 5, 197
Ions, role of rare earth, in the magnetic anisotropy of intermetallic compounds R_2Co_{17} 6, 38
Iron–carbon system under high pressure. Influence of graphitizing elements on equilibrium with the melt in the – 3, 101

– nickel austenite near the martensitic transformation point. Features of the state of – 5, 157
– , silicon, on the influence of tension on the domain structure of – 2, 61
– , α, transition of, from heat to force activated failure, structural peculiarities of the – 3, 154
Isotopes, hydrogen, in metals with a b.c.c. lattice. Spontaneous capture and the activation energy of diffusion of – 6, 1

Kinetic study of the dissolution of $M_{23}C_6$ carbide in austenite 2, 122
Kinetics, diffusion, of a binary metallic system allowing for non-diagonal coefficients of the Onsager matrix 1, 11
– of continuous precipitation in the nickel–zinc phase 6, 89
– of the substructural changes in fatigue tests of molybdenum single crystals 4, 149
"**Knob**" mechanism of diffusion decomposition of a thin polycrystalline film on a solid substrate. Investigation of the – 2, 101

Lattice, bubble, in the field of a point defect. The problem of the motion of a – 1, 173
– , crystal, determination of the positions of impurity atoms in a – from their characteristic X-radiation 2, 8
– , f.c.c., influence of pressure on annealing of slightly deformed metals with an – 1, 186
– , h.c.p., possible equilibrium configurations of dislocation nodes resulting from the interaction of basal dislocations in crystals with an – 1, 154
– instability and short-range order of displacements in α martensite structural investigation of γ and α phases near the martensite point of Fe–Ni alloy. III. 4, 82
– , martensite crystal, anomalies and thermodynamic properties of carbon in austenite. Relation between the – 4, 58
– superperiodicity in ordered quenching structures of b.c.c. solid solutions of nitrogen in vanadium 3, 188
Lithium and sodium, electron potentials and wave functions in – 2, 1
Losses, electromagnetic, in transformer steel. Influence of the perfection of crystallographic texture (110) [001] on the value of – 4, 40

Macrohardness of electrolytic copper. Influence of annealing on the structure and – 6, 184
Magnesium, thermodynamic functions of, the phonon spectrum and – 3, 160
Magnetic field, decomposition of Fe–Cr and Fe–Cr–Co solid solutions in a – 5, 77
– field, electron structure of an antiferromagnet in a – 4, 1
– fields, domains of interaction in high-coercivity alloys after treatment in differently oriented – 5, 191
– layer, hard, influence of the depth of the – on the character of remagnetization of exchange-coupled films 3, 52
– moments, magnetization of a paramagnet with non-interacting – 2, 168
– noise of cores in magnetic modulator devices with second-harmonic output 4, 29
– properties in strong magnetic fields. Investigation of single crystals of ordered iron–platinum alloys. I. – 2, 49
– properties of alloys of the systems UMn_2–UFe_2 and UMn_2–UCo_2 5, 30

– properties of palladium–iron–gold alloys. Influence of ordering on the – 2, 54
– reversal of a stripe domain structure magnetostatically bonded with a uniaxial base 2, 41
– state of γ-FeNiCr alloys in the critical range of concentration 5, 42
– susceptibility and thermal expansion of chromium–rhenium alloys 6, 178
– susceptibility of crystal with strong *s–d* exchange 3, 1
Magnetism of rare-earth metals. On the theory of – 4, 15
Magnetization and the critical fields of a uniaxial two-sublattice ferrimagnet in an external magnetic field 5, 35
– of alloys with mixed exchange interaction. Phenomenological theory of – 3, 68
– of a paramagnet with non-interacting magnetic moments 2, 168
– , static. II. Influence of – on the generation of acoustic second harmonics. Theory of non-linear effect in magnetoelastic media 3, 31
Magnetoresistance, measurement of, with low angles between current and magnetic field 5, 185
Magnetostriction, spontaneous, of chromium tellurides. Thermal expansion and – 2, 57
Magneto-volume anomaly in iron–manganese alloys with an f.c.c. lattice 4, 46
Magnets, non–linear magnetoelastic effcts and phase transitions in – 2, 17
– , uniaxial, on the free energy of – with weak exchange interaction and high magnetic anisotropy 5, 8
– with a conical helix magnetic structure 5, 1
Magnon contribution to the resistivity of single crystals of gadolinium–dysprosium alloys 1, 32
Maraging of iron–nickel–vanadium alloys, influence of cobalt on the – 5, 70
– , prior low-temperature, influence of – on changes in the properites of Fe–Ni–V alloys during high-temperature ageing 1, 61
Martensite lattice parameter during ageing of alloys Fe–Ni–V and Fe–Ni–Co–V. The "'abnormal" change of – 1, 84
– , multilayer, structures in alloys. Principles of the formation of – 1, 90
Martensitic phases, ε', ε, x and α, in steel. Crystallogeometry of the formation of – 6, 94
– point of Fe–Ni alloys. III. Lattice instability and short-order of displacements in a martensite. Structural investigation of γ and α phases near the – 4, 82
– transformation b.c.c. → f.c.c. in iron–silicon–nitrogen alloys 2, 112
– transformation in Heusler alloys of the system copper–manganese–aluminium 2, 118
Materials, irradiated, ordered. The universal character of the variation in the second-order phase transition point in 6, 186
Matrix, Onsager, diffusion kinetics of a binary metallic system allowing for non-diagonal coefficients of the – 1, 11
Mechanical properties of metals with a b.c.c. lattice. Influence of screen dislocations on the – 4, 118
Medium, elastically non-linear, integral equation for the displacement field of a dislocation in an – 2, 26
Melt in ⟨100⟩ direction, modelling the growth of a metallic f.c.c. crystal from the – 4, 108
– in the system iron–carbon under high pressure 3, 101
Memory effect in iron–nickel and iron–manganese alloys 1, 170
Metals, liquid. On the calculation of the resistivity of – 3, 6
– , rare-earth, and aluminium influencing the heat resistance of isolated cementite 3, 195

– , slightly deformed, with an f.c.c. lattice. Influence of pressure on annealing of – 1, 186
– , transition, elastically deformed. Quadrupole effects in – 3, 89
Metastable β phase during ageing of alloy VT16. Decomposition of the – 5, 151
Microstructure of dimpled fracture influenced by the size of dispersed phase particles 5, 173
Misorientation of a crystal influencing the generation of second acoustic harmonics 6, 23
Model, the four-phase, of the structure of iron–beryllium alloys at early stages of ageing 2, 72
Modelling the growth of a metallic f.c.c. crystal from the melt to ⟨100⟩ direction 4, 108
Modulator devices, magnetic, with second-harmonic output, magnetic noise of cores in 4, 29
Moduli, third-order, elastic, of alkali metals. Temperature dependence of the – 4, 23
Molybdenum influencing carbide formation in steels 30KhG and 30KhN 2, 88
– , polycrystalline, dislocation structure of the rolling texture components in – 4, 52
Morphology and structural composition of austenite formed during the heating of a quenched steel 5, 112
Motion, snake-like, of domain walls. Some features of the – 1, 51

Nature, dynamic and quasistatic, of atomic displacements near martensitic transformation point. On the – 5, 95
Néel segments in a Bloch wall of finite size. Distribution of – 3, 193
Neutron diffraction analysis of fine coherence effects in iron–nickel alloys with an f.c.c. lattice 6, 164
– diffraction analysis of phase formation in the system vanadium–nitrogen 1, 67
Nickel, volume and boundary diffusion of silver in – 5, 100
– , volume diffusion of indium in – 6, 160
– zinc α phase, kinetics of continuous precipitation in – 6, 89
Niobium with nitrogen and oxygen. Strain ageing of solid solutions of – 6, 136
Noble metals, calculation of the resistivity of dislocations in – 4, 161
Nuclear gamma resonance investigation of the state of cementite in cold-deformed steel 5, 59
– gamma resonance spectra. Computer calculation of the parameters of complex – 6, 47
– magnetic resonance and magnetic susceptibility of V_3Ga with different degrees of long-range order 1, 41

Observation of the process of recrystallization during heating in the column of an electron microscope with accelerating voltage 100 kV 2, 67
Optical properties of gold–copper alloys 4, 157
Order, atomic, in the approximation of static concentration waves. Size effect in the electron theory of short-range – 1, 23
– , long-range, nuclear magnetic resonance and magnetic susceptibility of V_3Ga with different degrees of – 1, 41
Ordering and the physical properties of Cu–Pd alloys 6, 66
– influencing the magnetic properties of palladium–iron–gold alloys 2, 54
– , isotropic, distribution of two kinds of interstitial atoms in different types of interstitial site in interstitial phases applied to the problem of – 5, 188
– of alloy Pd_3Fe, hyperfine interaction during – 3, 82
Oscillations, nonlinear of domain walls in magnetic films and plates 3, 37
Output, second-harmonic, magnetic noise of cores in magnetic modulator devices with – 4, 29

Palladium and its alloys. Influence of $\alpha \rightleftarrows \gamma$ phase transformation on the physico-mechanical properties of – 5, 109
Parameters of complex nuclear gamma resonance spectra. Computer calculation of the – 6, 47
Peak, "phosphorus" of internal friction in a pearlitic steel 1, 167
Peculiarities of the magnetic properties of Bi–MnBi composites 1, 56
– of the $\beta \rightarrow \omega$ transformation in Zr–Nb and Zr–Nb–Ge alloys with a high concentration of the β stabilizer 6, 77
– , structural, and porosity of polycrystalline vacuum condensates of aluminium 6, 70
– , structural, of the transition of β iron from heat to force activated failure 3, 154
Phase composition of cast complex nickel alloys 6, 150
– growths, abnormal, peculiarities of the analysis of mutual division during – 3, 175
– , metastable β, in titanium alloy VT9, decomposition kinetics of – 2, 107
– precipitation on domain boundaries of ordered alloy CuAu with additions of nickel and silver 1, 97
– transformations in nickel–cobalt alloys under high hydrogen pressure 4, 182
– transition of an antiferromagnet in a strong magnetic field 5, 21
– transitions in magnets. Non-linear magnetoelastic effects and – 2, 17
Phases, intermetallic, in alloy Kh12NM23 1, 181
Phenomenological theory of magnetization of alloys with mixed exchange interaction 3, 68
– of mutual diffusion. Calculation of non-equilibrium vacancies in the – 4, 185
Phonon spectrum and thermodynamic functions of magnesium 3, 160
Phosphorus influencing the resistance of highly-tempered steel to rupture and its dependence on the grain size 2, 161
Photoelectron spectroscopy and electron diffraction microscopy methods for the investigation of age-hardening aluminium–silver alloy 4, 101
Plasticity of metals under hydrostatic pressure. Investigation of – 5, 168
Plates, monocrystalline ferromagnetic, at commercial frequencies. On the theory of magnetic hysteresis. Features of the remagnetization of – 1, 27
Point defects in a hydrostatically compressed crystal. Dislocations and – 6, 8
– , martensitic transformation, features of the state of iron-nickel austenite near the – 5, 157
– , martensitic, transformation, on the dynamic and quasistatic nature of atomic displacements near – 5, 95
– , second-order phase transition, in irradiated, ordered materials. The universal character of the variation in the – 6, 186
Polycrystals containing defects with Coulomb displacement fields. X-ray scattering by – 1, 1
– of a copper–beryllium alloy, and an interpretation thereof. Features of the diffraction patterns of – 5, 133
Porosity, grain boundary, in superplasticity, role of – 3, 166
– of polycrystalline vacuum condensates of aluminium.The structural peculiarities and – 6, 70
Precipitation, continuous, in the nickel–zinc phase. Kinetics of – 6, 89
Properties, magnetic, of intermetallic compounds $Gd_xY_{1-x}Fe_3$ 5, 39
– , mechanical, of tin–antimony and tin–zinc solid solution 2, 164
– , physical, of Cu–Pd alloys. Ordering and – 6, 66

Quasibinary compounds $Sm(Co_{1-x}M_x)_{17}$. Concentration and temperature dependencies of the anisotropy constants in – **4,** 36

Radiation width of collective levels of a non-uniform electron plasma. Landau decay and the – **3,** 26

Range, permissible, of values for the parameters of the easy glide model **2,** 142

Rare-earth metals, on the theory of magnetism of – **4,** 15

Recording, thermomagnetic, monocrystalline FePd and FePt films for – **4,** 179

Recrystallization during heating in the column of an electron microscope with accelerating voltage 100 kV. Observation of the process of – **2,** 67

– in copper subjected to large and very large plastic strain. Fragmentation and dynamic – **1,** 136

Relation between $\gamma \rightarrow \alpha$ transformation kinetics and self-diffusion parameters **5,** 141

Relaxation, Snoek–Köster and the interaction of impurities with dislocations in iron alloys **4,** 114

– , surface, shape of the conduction electron spin resonance line in metals with strong – **3,** 16

– twins in the martensite of aluminium steels. On the existence of – **2,** 190

Remagnetization, high frequency of thin films **4,** 189

– mechanism of thin films of manganese–bismuth **4,** 175

– of exchange-coupled films, influence of the depth of the hard magnetic layer on the character of – **3,** 52

– of monocrystalline ferromagnetic plates at commercial frequencies. On the theory of magnetic hysteresis. Feature of the – **1,** 27

– , pulsed of films. The discontinuities arising in domain walls during the – **2,** 177

– , quasistatic and pulsating, of Néel domain walls **1,** 45

Resistance, heat, of isolated cementite influenced by rare-earth metals and aluminium **3,** 195

– , heat, of tantalum. Low temperature resistivity and – **5,** 194

– , high-temperature radiation, of monocrystalline molybdenum with substructural strengthening. Investigation of the – **3,** 190

– of lightly-tempered steel to rupture and its dependence on the grain size. Influence of phosphorus on the – **2,** 161

Resistivity, low-temperature and heat resistance of tantalum **5,** 194

– of bismuth–tellurium alloys depending on the concentration of the latter **6,** 158

– of dislocations in noble metals, calculation of the – **4,** 161

– of liquid metals. On the calculation of the – **3,** 6

– , residual, of pure polycrystalline copper. Influence of heat treatment on the size effect and grain boundary contributions to the – **3,** 46

Response, the lower, of the magnetic properties of iron–cobalt alloys to mechanical stresses as a result of heat treatment **3,** 178

Ribbon, Nb_3Sn diffusion, influence of zirconium on anisotropy of the critical currents of – **2,** 33

Ruthenium and rhenium in the range 2–300°K. Resistivity anisotropy of single crystals of – **6,** 54

Screw dislocations influencing the mechanical properties of metals with a b.c.c. lattice **4,** 118

Shape memory effect and mechanism of plastic deformation in manganese–copper alloys **4,** 139

Shape of the conduction electron spin resonance line in metals with strong surface relaxation 3, 16
Shear, catastrophic, in niobium. On the fine structure of the band of – 1, 142
Shock loading influencing the structure and properties of dispersion hardening alloys 1, 110
Single-domain materials, asymmetry of minor hysteresis cycles in – 6, 180
Size effect in the electron theory of short-range atomic order in the approximation of static concentration waves 1, 23
– of dispersed phase particles influencing the microstructure of dimpled fracture 5, 173
Skin effect, boundary condition for the distribution function of conduction electrons with anisotropic law of dispersion and the correction to the impedance of a metal in the normal – 6, 17
Slip geometry and the dislocation structure in vanadium single crystals as functions of degree and temperature of deformation 1, 130
Softening and the structure of hot rolled austenite 1, 147
Solid solutions, Fe–Cr and Fe–Cr–Co in a magnetic field. Decomposition of – 5, 77
– of aluminium–lithium, secondary ion–ion emission investigation of the decomposition of supersaturated – 5, 197
– of niobium with nitrogen and oxygen, strain ageing of – 6, 136
– of tin–antimony and tin–zinc. Mechanical properties of – 2, 164
Sound generation by an electromagnetic wave near orientational first-order phase transitions in antiferromagnets 1, 179
Spectra, shell electron PES, of components of alloys of transition and noble metals. Asymmetry of the – 6, 30
Split configuration, vibration spectrum of crystals with an interstitial atom in a – 6, 176
Stabilities, different, low-temperature thermal expansion of iron-chromium–nickel alloys of – 2, 83
Steel, aged austenitic Kh12N20T3R and its role in dispersion hardening. Submicroscopic structure of – 4, 74
– , cold-deformed, nuclear gamma resonance of the state of cementite in – 5, 59
– , crystallogeometry of the formation of ε', ε, x' and α martensitic phases in – 6, 94
– , high-temperature thermomechanical treatment of, diffusion of carbon in austenite after – 1, 177
– OKh18N10T. Nature of the anomalies in the temperature dependence of the yield point of – after low-temperature cycles 2, 155
– , pearlitic, "phosphorus" peak of internal friction in a – 1, 167
– , quenched, morphology and structural composition of austenite formed during the heating of a – 5, 112
– , stainless, after HTMT with high rates of deformation. Substructure of – 6, 106
– , transformer, influence of the perfection of crystallographic textures (110) [001] on the value of electromagnetic losses in – 4, 40
Steels, aluminium, on the existence of relaxation twins in the martensite of – 2, 190
– , chromium–manganese during deformation. X-ray diffraction analysis of the fine structure of ageing – 1, 165
– 30KhG and 30KhN, influence of molybdenum on carbide formation in – 2, 88
– , stainless, at different rates of heating. Transformation of deformation martensite to austenite in – 6, 114

– , trip, strengthened by hydroextrusion. Structure and mechanical properties of – 6, 82
Strains, ultrasonic influencing internal friction in copper 6, 169
– , plastic, fragmentation and dynamic recrystallization in copper subjected to large and very large – 1, 136
Strength of dislocation junctions and the work-hardening of alloys with the Ll_2 superstructure at high degrees of deformation 1, 103
Strengthening of alloy 45KKhVN. Tempering transformation and the – 3, 147
– , radiation, and plastic instability of vanadium and alloy V–Zr–C 1, 117
– substructural, investigation, of the high-temperature radiation resistance of monocrystalline molybdenum with – 3, 190
Stresses, dynamic elastic, influencing large Barkhausen discontinuities in single crystals of $GdCo_5$ 1, 184
– , static, influencing the ordering of $CrNi_2$ type alloys 3, 119
Structural electron microscopic investigation of the graphite in a quenched nickel–carbon alloy 5, 121
– investigation of γ and α phases near the martensitic point of Fe–Ni alloys. III. Lattice instability and short-range order of displacements in α martensite 4, 82
– variations during the deformation and ageing of a metastable β titanium alloy of Ti–Mo 1, 78
– variations of polycrystalline vanadium during deformation. Investigations of the – 2, 149
Structure and mechanical properties of heat resistant alloy EI698. Influence of step ageing on the – 6, 127
– and mechanical properties of trip steels strengthened by hydro-extrusion 6, 82
– , fine, of the band of catastrophic shear in niobium 1, 142
– , submicroscopic, of aged austenitic steel Kh12N20T3R and its role in dispersion hardening 4, 74
Substructure and properties of quenched, deformed beryllium bronze influenced by prerecrystallization annealing 4, 92
– of stainless steel after HTMT with high rates of deformation 6, 106
Superplasticity, role of grain boundary porosity in – 3, 166
Superstructure at high degrees of deformation. Strength of dislocation junction and the work-hardening of alloys with the Ll_2 – 1, 103
Surface layer, diffusion in half space through a – 2, 167
Susceptibility, magnetic of V_3Ga with different degrees of long-range order. Nuclear magnetic resonance and – 1, 41
System (011) ⟨011⟩, conditions for formation of a twin α martensite structure on the – 4, 97
– $(Fe–Ni)_{1-x}(SiO)_x$, stresses in cermet films of the – 6, 146
Systems $UMn_2–UFe_2$ and $UMn_2–UCo_2$, magnetic properties of alloys of – 5, 30

Tellurides, chromium, thermal expansion and spontaneous magnetostriction of – 2, 57
Temperature dependence of hydrogen mobility in tantalum 2, 187
– dependence of the third-order elastic moduli of alkali metals 4, 23
Tension influencing the domain structure of silicon iron 2, 61
Texture barriers to grain growth 1, 189

– components, rolling, in polycrystalline molybdenum, dislocation structure of the – 4, 52
– (110) [001], crystallographic perfection, influencing the value of electromagnetic losses in transformer steel 4, 40
The discontinuities arising in domain walls during the pulsed remagnetization of films 2, 177
Thermal expansion and spontaneous magnetostriction of chromium tellurides 2, 57
– expansion, low-temperature, of iron–chromium–nickel alloys of different stabilities 2, 83
Titanium, VT9, alloy, decomposition kinetics of metastable β phase in – 2, 107
Transformation $\gamma \rightarrow \alpha \rightarrow \gamma$, double martensitic. Distribution of austenite orientations after the – 4, 62
– , $\beta \rightarrow \omega$, in Zr–Nb and Zr–Nb–Ge alloys with a high concentration of the β stabilizer. Peculiarities of the – 6, 77
– , $\alpha \rightarrow \gamma$, in iron–cobalt–vanadium alloys. Influence of heating, rate on dilatation anomalies and – 1, 71
– , $\alpha \rightleftarrows \gamma$, influencing the physico-mechanical properties of palladium and its alloys 5, 109
– , martensitic, and the temperature M_{el} relative to the change in austenite state 3, 111
– of deformation martensite to austenite in stainless steels at different rates of heating 6, 114
– of diffuse electron scattering intensity distribution during the martensitic transformation of aged austenite 4, 164
– , pearlitic, by ultrasonic vibration. Acceleration of – 5, 127
– , tempering, and the strengthening of alloy 45KKhVN 3, 147
Transformations, magnetic, and internal friction in polycrystalline dysprosium 1, 175
Treatment, thermomechanical, influencing the structure and plasticity of a tin–lead eutectic 4, 191

Vacancies, non-equilibrium, in the phenomenological theory of mutual diffusion. Calculation of – 4, 185
– or substitutional impurities. Electron spectrum in a crystal with – 3, 10
Vacancy statics and kinetics in a non-uniformly stressed crystal 3, 136
Values for the parameters of the easy glide model. Permissible range of – 2, 142
Vanadium–nitrogen, system. Neutron diffraction analysis of phase formation in the – 1, 67
– , polycrystalline. Investigation of the structural variations of – during deformation 2, 149
Variation, local, of the magnetic anisotropy constant due to line imperfections 5, 50
Vibration spectrum of crystals with an interstitial atom in a split configuration 6, 176
– , ultrasonic, acceleration of pearlitic transformation by – 5, 127
Void, isolated, and brittle cleavage in a one-domain ferromagnet 1, 160
Voids and dislocations in molybdenum. A theoretical description of the annealing of radiation – 2, 133
Volume diffusion of indium in nickel 6, 160

Wave, electromagnetic, sound generation by an – near orientational first-order phase transitions in antiferromagnets 1, 179
– functions in lithium and sodium. Electron potentials and – 2, 1

Waves, elastic, in magnets with a conical helix magnetic structure **5,** 1
– , spin, in an antiferromagnet. Interaction of a moving dislocation with – **3,** 171
– , static concentration, size effect in the electron theory of short-range atomic order in the approximation of – **1,** 23
X-radiation, determination of the position of impurity atoms in a crystal lattice from their characteristic – **2,** 8
X-ray diffraction analysis of the fine structure of ageing chromium-manganese steels during deformation **1,** 165
– scattering and the structure of an aluminium–silver alloy at the second stage of ageing **5,** 162
– scattering by polycrystals containing defects with Coulomb displacement fields **1,** 1

Zinc concentration, high, natural ageing of aluminium–zinc alloys with a – **2,** 97
Zirconium influencing anisotropy of the critical current of Nb_3Sn diffusion ribbon **2,** 33
